

Felicity - the First Choice in Cherry

Cherry tomatoes are becoming a staple in many markets. They are an absolute necessity in the restaurant trade and are even now becoming a regular in fast food offerings. They have the advantage of extended shelf life in a pre-prepared salad, and offer sweet, healthy refreshment in a single bite.

The world wide increase in demand has resulted in intensive breeding in cherry tomatoes. Felicity is a direct result of this. Felicity comes with high resistance to ToMV & Fol 1,2,3 and intermediate resistance to N & TYLCV. Fruit size is 15 to 25g depending upon pruning regime, and marketable fruit size is maintained to the top of the vine.

Brix is consistently high over a range of conditions. This outstanding package together with its high yield potential makes Felicity the growers' & buyers' first choice cherry tomato.
