

HELIOS

Yellow capsicum

HELIOS is a new addition to the Lefroy Valley capsicum range. This is a bright yellow large blocky capsicum with a compact sturdy bush. **HELIOS** is highly suited to open field growing in high density planting with no support. Its disease package which includes Xcv 1,2,3 (BLS) makes it suitable for the whole northern and central Queensland growing seasons.

This variety showed obvious advantages in trials in Queensland in terms of earliness to change to full yellow, high, concentrated yield and large blocky 10 x 10 fruit. Commercial plantings are now underway.
