

CLOE

mini cucumber

CLOE

Cloe is a new Lebanese greenhouse cucumber for spring, summer and autumn harvest. It has medium internodes, with self topping side shoots (which results in higher mainstem production).

- Excellent balance between fruitset and plant growth.
- Early production and high total yield.
- Strong heat tolerance. Cloe is adapted to higher plant densities.

Cloe is multifruit (2-3 fruit per node). The fruit are very uniform in length (14-16cm), of outstanding quality, medium to dark green in colour, well filled, cylindrical, smooth to slightly ribbed and shiny.

Cloe has intermediate resistance to Powdery Mildew (*Sphaerotheca fuliginea*) and is highly resistant to Cucumber Mosaic Virus (CMV), Watermelon Mosaic Virus (WMV), Cucumber Vein Yellowing Virus (CVYV) and Ccu Scab (*Cladysporium*).

Intermediately resistant plant varieties would restrict the growth and development of the specified pest or pathogen. The plant variety may however exhibit a greater range or degree of symptoms when compared to a highly resistant variety. Intermediately resistant plant varieties will still show less severe symptoms or disease damage than susceptible plant varieties when the crop is grown under similar environmental conditions and is subjected to the same disease or pest pressure.

Highly resistant plant varieties would highly restrict the growth and development of the specified pest or pathogen under normal growing conditions and pest pressure when compared to susceptible varieties. These plant varieties may, however, exhibit some symptoms or damage under heavy pest pressure or stressful growing conditions.

DISEASE KEY:

Ccu - Scab (*Cladysporium*) **Sf** - Powdery Mildew (*Sphaerotheca fuliginea*) **CMV** - Cucumber Mosaic Virus
WMV - Watermelon Mosaic Virus **CVYV** - Cucumber Vein Yellowing Virus

* **Disclaimer:** Lefroy Valley carries out stringent trialing throughout Australia/New Zealand prior to releasing varieties into the market place. We strongly recommend that all varieties be trialed under your growing conditions prior to commercial sowings taking place. For details of up to date trial results in your area please contact Lefroy Valley. Above information is valid 6 months from publication date. All cultural and descriptive information is supplied in good faith, as a guide only. Varietal performance is influenced by many variables, namely climatic, soil conditions, cultural and management practices. No liability will be accepted by Lefroy Valley or its representatives as to final performance based on this information.
