Key: 1 = Poor, 5 = Best, - = No Data. * = based on limited data.
Data is based on averages collected from around the world & are indicative relative values only. Always trial in your region.
All Disease and chemical are rated 1 - 5 where;
1 = Susceptible, 2= Moderately Susceptible, 3= Moderate, 4 = Moderately Tolerant and 5 = Tolerant.
Common Rust Rp1D ratings: Rp means that it has the Rp1d gene and will be tolerant to that strain of Rust.
A 1- 5 rating means it does not have the Rp1D gene but has this rating to all current strains of Rust including the Rp1D strain.
Rust race D-v: 1- 5 means it will have this rating to all other current strains of Rust.
Chemicals: Callisto(Active: mesotrione) Accent (Active:nicosulphuron) Option (Active:foramsulfuron)

Goldenpearl is a high quality, exceptional cob style hybrid. With very tender pericarp, straight kernel rows, and a fantastic colour contrast between its bright yellow and pristine white kernels. Excellent tip fill, good husk cover and an ideal length to width ratio. It is difficult to grow and should be given optimum conditions, susceptible to seedling blights under poor conditions.

Crunch is a strong vigorous bicolor. With excellent eating quality on a grower friendly plant, this variety will cope with a wide range of conditions. The medium sized well filled cobs have great colour definition, excellent tip fill and long shelf life.

Samurai is a Rust tolerant supersweet bicolor with deep yellow and bright white kernels on a very large cob. Hence Samurai provides a late planting option for bicolor producers worldwide.

Flair is a reliable variety with NCLB tolerance, has good eating qualities and sturdy plant style. Flair has reasonable colour contrast. A medium size cylindrical cob and high row count produces an attractive package, on a strong vigorous plant.

Entree is a very early large cob bicolor supersweet. Ideal for start up and catch up plantings. The sturdy vigorous plant suitable for cooler conditions. Has field tolerance to Rust and NCLB. The large cylindrical cobs suit freshmarket and home garden.

NEW TRIAL: HB01920J is an early maturing medium cob size variety, aimed for very early start up and catch up plantings. Has extremely good eating quality. Medium sized cob and a sturdy vigorous plant. Good tolerance to Rust. Competes in the Entrée slot.

NEW TRIAL: HB1321OK is a full season large cob variety, in the style of Goldenpearl. With an excellent plant style, good vigour and large uniform cylindrical cobs. Trial in all main season slots. Tolerance to Rp1d Rust.

Supersweet White Hybrids.

Everest: HW1292NF is a mid season, large cob sized 18 row variety with creamy white colour & excellent quality. Everest is the first SH2 White released commercially by Snowy River. On a strong plant style with moderate tolerance to Rust & moderately susceptible to NCLB. Cobs can get a large diameter.

HW1287NF is a full season medium sized 18 row variety with a bright white colour & excellent quality. Moderately susceptible to Rust and NCLB. Good plant style

HW2094NG is a full season large sized 18 row variety with a creamy white colour and average quality. Good tolerance to Rust & moderately tolerance to NCLB & good tolerance to JGMV. Great plant style, moderate husk cover.

The information contained herein is intended as a guide only. Varietal performance is influenced by many variables, including soil and climatic conditions, cultural and management practices.
